The 'Everseal' padless facemask manufactured in latex material with rubber mount, is available in sizes 0, 1, 2, 3, 4.

A bonded malleable strip within the upper portion of the mask together with the anatomical and shallow construction, guarantees an adequate seal on any type of face with a minimum of dead space.

The durability of latex material is well known, and the longer life of the mask will effect a considerable saving to the busy hospital.

The M.I.E. 'Everseal' facemask has been acknowledged by many leading anaesthetists as a definite advance in facemask design.

The 'Everseal' facemask is registered design No. 868449 of Medical & Industrial Equipment Ltd.
